

Rohit More

Cloud & DevOps Engineer | AWS • Docker • CI/CD • Linux | Production Infrastructure & Open-Source Networking Projects
+91-9512418859 | rohitmore.dev@gmail.com | github.com/rohitbytecode

PROFILE

Software Engineer with 2+ years of experience owning production deployments and cloud infrastructure for a healthcare SaaS platform. Responsible for the full deployment lifecycle on AWS - EC2 provisioning, IAM and Security Group configuration, Nginx reverse proxy/HTTPS setup, PM2 process management, and CI/CD pipelines via GitHub Actions. Experienced diagnosing infrastructure and networking issues (LAN connectivity, port exhaustion, TLS misconfiguration) in live production environments, and building observability stacks with Prometheus, OpenTelemetry, and structured logging. Self-directed learner actively building practical experience with Kubernetes, Jenkins, GitLab CI/CD, and Terraform.

SKILLS

Operating Systems: Linux (Ubuntu) Server

Scripting: Bash (task automation scripts), Node.js scripting

Version Control & CI/CD: Git, GitHub, GitHub Actions (production CI/CD pipelines)

Containers: Docker, Docker Compose, Multi-stage Builds

Cloud (AWS): EC2, S3, IAM, Security Groups

Web/Proxy & Process Mgmt: Nginx (reverse proxy, HTTPS termination), Caddy, PM2 (process lifecycle management)

Networking: LAN configuration & troubleshooting, mDNS/hostname resolution, TCP/port management, HTTPS/TLS, DNS fundamentals

Monitoring & Observability: Prometheus, OpenTelemetry, Grafana, Pino (structured logging)

Databases: MongoDB, PostgreSQL, Redis

Backend/Languages: Node.js, Express.js, TypeScript, JavaScript, Java

PROFESSIONAL EXPERIENCE

Software Engineer - Malavia Hospital, Surat, GJ

April 2024 - Present

- Configured and maintained Nginx as a reverse proxy with HTTPS termination, SSL certificate management, and request routing for production Node.js services.
- Owned end-to-end deployment and infrastructure maintenance of a production healthcare claims platform used daily by hospital staff, on AWS EC2 with IAM-based access control and Security Groups for network-level restriction.
- Managed application process lifecycle in production using PM2, ensuring uptime and automatic recovery of Node.js services.
- Implemented GitHub Actions pipelines for automated build, testing, and deployment to AWS EC2.
- Implemented an observability stack - Prometheus metrics, OpenTelemetry tracing, and Pino structured logging - to support production monitoring and debugging.
- Automated nightly backup jobs (node-cron scheduled tasks integrating with the Google Drive API via a service account) as part of routine infrastructure maintenance.
- Wrote basic Bash scripts to support recurring deployment and maintenance tasks.

ENGINEERING HIGHLIGHTS

- Recovered EC2 instance access after an SSH firewall lockout.
- Solved a production TLS/HTTPS and Nginx misconfiguration affecting health-check reliability.
- Diagnosed and resolved a TCP TIME_WAIT socket exhaustion issue in production.
- Fixed LAN hostname resolution failures using a runtime IP discovery approach (`os.networkInterfaces()`).

OPEN-SOURCE PROJECTS

Horizon - Reverse Proxy & Load Balancer (TypeScript, Node.js)

03/2026 - Present

- Built an open-source reverse proxy and load balancer featuring round-robin load balancing, active health checks, automatic failover, and real-time monitoring endpoints for backend availability and latency. github.com/rohitbytecode/Horizon

Hospital Management SaaS — Backend Deployment (JavaScript, Node.js, MongoDB)

12/2025 - 03/2026

- Developed backend services for a multi-tenant SaaS with retry logic, error handling, and structured logging for fault-tolerant operation. github.com/rohitbytecode/HMS-SaaS

ADDITIONAL TECHNICAL EXPOSURE (SELF-DIRECTED / LAB PROJECTS)

Practical, self-directed learning outside of professional work (not yet in production):

- Kubernetes: deployed and managed pods, services, and deployments in a personal lab/learning environment.
- Jenkins: built and ran CI pipelines in personal projects.
- Terraform: wrote basic infrastructure-as-code configurations for personal projects.

EDUCATION

Bachelor of Computer Application (BCA) - Vivekanand College for Advanced Computer & Information Science, Surat, GJ
2023 - 2026
