

ROHIT MORE

Full-Stack Engineer (React / TypeScript / Node.js)

+91-9512418859 | rohitmore.dev@gmail.com | github.com/rohitbytecode

PROFILE

Full-Stack Engineer with 2+ years shipping production healthcare SaaS in React, TypeScript, and Node.js. Experienced building responsive, data-rich UIs, designing and integrating REST APIs, and connecting frontend applications to cloud-hosted backends and data pipelines (AWS, MongoDB, PostgreSQL). Recent independent work includes a node-based workflow builder for an AI pipeline tool and a NestJS/PostgreSQL service layer, alongside day-to-day ownership of a live hospital claims platform used by clinical staff. Comfortable working closely with Data, DevOps, and Product teams and translating complex data into clear, usable interfaces.

SKILLS

Languages: TypeScript, JavaScript, Java

Frontend: React.js, Next.js, ReactFlow (node-based UIs), Zustand (state management), responsive UI/UX

Backend & APIs: Node.js, Express.js, NestJS, RESTful API design, Socket.IO, JWT Authentication, RBAC

Data: MongoDB, PostgreSQL, Drizzle ORM, Redis

Cloud & DevOps: AWS (EC2, S3, IAM), Nginx, Docker, PM2, GitHub Actions (CI/CD), Render, Railway

Observability: Prometheus, OpenTelemetry, Pino

Tools: Git, GitHub, Postman, Electron

Problem Solving: Data Structures & Algorithms (Java)

EXPERIENCE

Full Stack Engineer | Malavia Hospital, Surat, GJ

Apr 2024 – Present

- Built and own a healthcare insurance claims management platform end-to-end (React, TypeScript, Node.js, Express, MongoDB) used daily by hospital staff, from architecture through deployment and maintenance.
- Designed and integrated REST APIs and role-based access control (JWT, RBAC) across frontend and backend, and added WebSocket-based concurrency control to prevent conflicting edits during simultaneous claim processing.
- Replaced manual, paper-based claim workflows with a centralized web application, cutting processing time and improving operational efficiency for clinical and billing staff.
- Deployed and maintained the application on AWS (EC2, IAM, MongoDB Atlas) behind Nginx with PM2 and HTTPS, working closely with a small cross-functional team to ship features on a live production system.
- Instrumented the stack with Prometheus metrics, OpenTelemetry tracing, and structured Pino logging to improve monitoring, debugging, and data visibility for the team.
- Built financial settlement workflows (discounts, payer contracts, TDS deductions, vendor settlements) that translate complex, rule-heavy financial data into clear, actionable views for hospital finance staff.
- Optimized backend performance through MongoDB indexing, connection pooling, caching, and background job processing.

PROJECTS

Visual Pipeline Builder

2026

- Built a drag-and-drop, node-based workflow builder in React and TypeScript (ReactFlow, Zustand) that lets users visually compose data pipelines and connects to a Python FastAPI backend for pipeline analysis.
- Focused on frontend architecture and state management for a complex, data-rich UI — directly analogous to building interfaces on top of AI models and data pipelines.

Contact Manager (Business Card Scanner)

2026

- Full-stack app with a server-side TypeScript API (NestJS), PostgreSQL, and Drizzle ORM, paired with a React frontend — hands-on experience with the NestJS/server-side TS stack.
- Designed the REST API and database schema, and handled data validation and error handling end-to-end.

Horizon — Reverse Proxy & Load Balancer

Mar 2026 – Present

- Built a reverse proxy/load balancer in TypeScript with round-robin routing, active health checks, automatic failover, and a metrics endpoint exposing throughput, latency, and backend health.

github.com/rohitbytecode/Horizon

Hospital Management SaaS

Dec 2025 – Mar 2026

- Built a multi-tenant backend (TypeScript, Node.js, MongoDB) with scalable REST APIs, retry logic, and structured error handling.

EDUCATION

Bachelor of Computer Application (BCA)

2023 – 2026

Vivekanand College for Advanced Computer & Information Science, Surat, GJ
