PROFILE

Backend Engineer with 2+ years of experience designing and deploying scalable healthcare SaaS applications using TypeScript, Node.js, MongoDB, and AWS. Strong expertise in distributed systems, cloud-native backend engineering, and Data Structures & Algorithms using Java.

EDUCATION

Vivekanand College for Advanced Computer & Information Science

Surat, GJ

Bachelor of Computer Application (BCA)

2023- 2026

SKILLS

Programming Languages: Java, JavaScript, TypeScript

Backend Development: Node.js, Express.js, REST APIs, Socket.IO, JWT Authentication, RBAC, Distributed Systems

Database: MongoDB, PostgreSQL, Redis

Cloud & DevOps: AWS EC2, Amazon S3, IAM, Linux (Ubuntu), Nginx, PM2, Docker, GitHub Actions (CI/CD), Prometheus, OpenTelemetry, Render, Railway

Architecture & Scalability: Distributed Locking, Connection Pooling, Caching, Background Job Processing

Frontend: React.js, [Next.js](#)

Problem Solving: Data Structures & Algorithms (Java)

Tools: Git, GitHub, Postman, Electron

EXPERIENCE

Malavia Hospital- IT department

Surat, GJ

Backend Engineer

April 2024 – Present

- Architected and led development of a multi-tenant Healthcare Insurance Claim Management SaaS, designing scalable backend services using TypeScript, Node.js, Express, MongoDB, and React.
- Engineered a multi-tenant backend with WebSocket-based pessimistic concurrency control, RBAC, and JWT authentication, eliminating concurrent claim edit conflicts in a multi-user healthcare environment.
- Designed and deployed the production SaaS on AWS using EC2, S3, IAM, Nginx, PM2, and MongoDB Atlas with HTTPS-enabled cloud infrastructure.
- Architected the platform to support 500K+ claims, 1,000+ concurrent users, 5M+ notifications, and 20M+ API requests/day through MongoDB indexing, PM2 clustering, connection pooling, caching, and background job processing.
- Implemented observability with Prometheus (5 custom metrics), OpenTelemetry distributed tracing, and structured logging with Pino.
- Built a financial settlement engine supporting hybrid discounts, payer contracts, TDS deductions, and hospital/vendor settlements.

PROJECTS

Horizon - Reverse Proxy & Load Balancer

03/2026 - present

- Built a lightweight reverse proxy and load balancer from scratch using TypeScript and Node.js.
- Implemented Round-Robin load balancing, active health checks, automatic failover, and HTTP request forwarding across multiple backend services.
- Exposed real-time metrics for request throughput, latency, active connections, and backend health through a dedicated monitoring endpoint.

 [rohitbytecode/Horizon](https://github.com/rohitbytecode/Horizon)

Hospital Management SaaS

12/2025 – 03/2026

- Built a multi-tenant Hospital Management SaaS backend using TypeScript, Node.js, MongoDB, and scalable REST APIs.
- Implemented retry logic, error handling, and logging for reliable, fault-tolerant performance.
